

GENERAL REPEATER PRACTICES

- 1) Identify your station when accessing the repeater, at least every ten minutes during a QSO, and at the end of a QSO.
- 2) Base station usage of the repeater should be minimized to facilitate the use of the repeater by mobile and portable stations. Emergency and priority communications will be given precedence over normal communications.
- 3) Transmissions are to be kept short, with frequent pauses to allow other stations to break in.
- 4) Each operator is responsible for making sure all their repeater communications are in accordance with FCC regulations.
